

## **METHOD OF DEVELOPING WIRELESS DEVICE APPLICATIONS USING AN INTEGRATED EMULATOR AND AN IDE**

### **Abstract**

A method for facilitating development of an application for a wireless-connected device which includes combining, in a module, a plurality of development tools used in the creation of the application. The module is integrated with an emulator of the wireless-connected device. The integration of the module includes creating and packaging the application with a plurality of profiles without modification of the module. The module may be integrated into an Integrated Development Environment.
